

## CLAIMS

What is claimed is:

*Sub A)*

1. A method comprising:
  - 2 receiving video content from a fixed storage media;
  - 3 receiving data content from a dynamic storage media, wherein the dynamic storage media receives the data content from a remote location through a network connection;
  - 4 overlaying the data content onto the video content to generate combined content in a single window; and
  - 5 displaying the combined content.

*Detailed Description*

- 1 2. The method of claim 1, wherein the network connection is a wireless connection.
- 1 3. The method of claim 1, wherein the fixed storage media is a Digital Versatile Disc.
- 1 4. The method of claim 1, wherein the second portion of data includes HyperText Markup Language data.
- 1 5. The method of claim 1, wherein a storage size of the fixed storage media is larger than a storage size of the dynamic storage media.
- 1 6. The method of claim 1, further comprising removing background from the data content such that the overlaying of the data content onto the video content is transparent.
- 1 7. A method comprising:
  - 2 storing markup language content retrieved from a remote location;

3           downloading the markup language content and configuration data into at least one  
4   device, the device to integrate the markup language content with video content being  
5   retrieved by a Digital Versatile Disc (DVD) drive; and  
6           uploading system data periodically from the at least one device.

a/  
cont

1       8.   The method of claim 7, further comprising modifying the markup language  
2   content retrieved from the remote location such that the markup language content  
3   includes only data content.

1       9.   A device coupled to a remote server through a network, the device comprising:  
2           a storage memory that includes low-bandwidth media, wherein the remote server  
3   can update the low-bandwidth media through the network;  
4           a Digital Versatile Disc (DVD) drive to accept a DVD, the DVD including high-  
5   bandwidth media;  
6           an overlay unit coupled to the storage memory and the DVD drive, the overlay  
7   unit to overlay the low-bandwidth media over the high-bandwidth media to form  
8   combined content in a single window; and  
9           a video display to display the combined content in the single window.

1       10.   The device of claim 9, wherein the device is coupled to the network through a  
2   wireless connection.

1       11.   The device of claim 9, wherein the low-bandwidth media includes markup  
2   language content.

1       12.   The device of claim 9, wherein the high-bandwidth media includes video content.

1        13. A server coupled to at least one device through a network, the server comprising:  
2                  a local directory structure that includes at least one directory having at least one  
3                  file that includes data content, wherein each directory is associated with a device, the  
4                  server to transmit at least one file from the at least one directory to the associated at least  
5                  one device;  
6                  at least one script to be executed by a processor on the server, the at least one  
7                  script having commands to retrieve the data content from at least one remote server  
8                  coupled to the network and to store the data content into the at least one file; and  
9                  a database that includes system data that has been retrieved from the at least one  
10                 device.

14. The server of claim 13, wherein the data content is markup language text.

15. The server of claim 13, wherein the at least one script are Common Gateway Interface scripts.

1 16. The server of claim 13, wherein the at least one device is wirelessly coupled to the  
2 network connection.

- 1    17.    A system comprising:
  - 2        a device wirelessly coupled to a network, the device comprising:
    - 3            a storage memory that includes markup language content;
    - 4            a Digital Versatile Disc (DVD) drive to accept a DVD, the DVD including
    - 5            video content;

6                   an overlay unit coupled to the storage memory and the DVD drive, the  
7 processor to overlay the markup language content onto the video content to form  
8 combined content in a single window; and  
9                   a video display to display the combined content; and  
10                  a server coupled to the device through the network, the server comprising:  
11                  a local directory structure that includes a directory having at least one file  
12 that includes markup language content, the server to transmit the at least one file from the  
13 directory to the device;  
14                  at least one script to be executed by a processor on the server, the at least  
15 one script having commands to retrieve the markup language content from at least one  
16 remote server and to store the markup language content into the at least one file; and  
17                  a database that includes system data that has been retrieved from the  
18 apparatus.

1       18. The system of claim 17, wherein the markup language content is modified such  
2       that the markup language content includes only data content.

1       19. A machine-readable medium that provides instructions, which when executed by  
2       a machine, cause said machine to perform operations comprising:  
3                  receiving video content from a fixed storage media;  
4                  receiving data content from a dynamic storage media, wherein the dynamic  
5       storage media receives the data content from a remote location through a network  
6       connection;  
7                  overlaying the data content onto the video content to generate combined content  
8       in a single window; and  
9                  displaying the combined content.

1       20.   The machine-readable medium of claim 19, wherein the network connection is a  
2        wireless connection.

*a /*  
*Cont / 2*

1       21.   The machine-readable medium of claim 19, wherein the fixed storage media is a  
2        Digital Versatile Disc.

1       22.   The machine-readable medium of claim 19, wherein the second portion of data  
2        includes markup language data.

1       23.   The machine-readable medium of claim 19, wherein a storage size of the fixed  
2        storage media is larger than a storage size of the dynamic storage media.

1       24.   The machine-readable medium of claim 19, further comprising removing  
2        background from the data content such that the overlaying of the data content onto the  
3        video content is transparent.

1       25.   A machine-readable medium that provides instructions which, when executed by  
2        a machine, cause said machine to perform operations comprising:  
3              storing markup language content retrieved from a remote location;  
4              downloading the markup language content and configuration data into at least one  
5        device, the device to integrate the markup language content with video content being  
6        retrieved by a Digital Versatile Disc (DVD) drive; and  
7              uploading system data periodically from the at least one device.
